

# **The Hungarian food economy after the EU accession**

**Dr. György Raskó**

**IAMA Forum& Symposium, Budapest,  
June 20-23, 2009.**

# The Hungarian food industry is the loser of the regime change and the EU accession

Volumen index: %

Name		Period	Production	Inland	Export
				realization	
Base year		1990	100,0	100,0	100,0
Periods of change	Years of privatization	1991-1996	-8,6	-7,6	-2,6
	Years following the EU accession	2004-2008	-16,9	-24,3	4,8
Last year of periods		2008	76,1	69,6	109,4

## External trade of processed food in million €s

2003	Export	Import	Balance
Food economy in total	2 855	1 494	1 360
Out of total: processed food	2 134	1 187	947
Percentage of food industry products in %	74,8	79,4	-
2008			
Food economy in total	5 735	3 820	1 915
Out of total: processed food	3 264	2 990	274
Percentage of food industry products in %	57,0	78,2	-

# The share of the Hungarian food economy from the Hungarian food market

Source: ÉFOSZ, Budapest

# Changes after the EU accession

- Sharp competitive market immediately, instead of the former, well-protected inland market
- Overflow of food products that are cheaper than Hungarian ones but often of low quality
- Continuous reduction of production and loss of inland market share in almost all branches
- The import of processed food rose with a boom, while export grew only in modest amounts
- The import of agricultural raw materials tripled in five years (2003: 721mEURs, 2008: 2471mEURs)
- Loss of position with relation to raw material growers and retail trade (the double press)

# Trade chains relations

- Retail chains in advantage (rapid decline of independent small shops, enter of the big discount chains (Lidl , Aldi)
- Net selling price below cost level
- Global purchasing (procurement companies)
  - CBA COOP, Tesco, METSPA(turnover: 2.0 – 2.5 bnEuro/year)
- Common action against them is punished with cartel charges by Office of Competition.
- „Grey” trade flourishes
- Sales of surplus supplies became permanent
- Private Labels underplay branded products
- Refunds (back bonuses) without service (30% and above, in spite of the code of good practice)
- Late payment and arbitrary reductions by the chains. Pressure for implicit deals (delisting threats)
- Creation, than refusal of the Food Code by the Office of Competition

# The food industry and the current economic and financial crisis

- Demand for the processed „branded” products is decreasing
- The loan capacity of banks is minimal also in the case of good clients
- Meat, poultry, milk and canned food industry in the verge of bankruptcy
- Government initiatives (human resource retention, government guarantee for bank loans) are insufficient
- The main problem:
  - Loans are irrationally expensive (15-18% interest / year), that a responsible food company will not accept if it has long-term prospects
  - Lack of capital and excessive indebtedness – a straight way towards bankruptcy

# Possible ways to restore competitiveness

- A significant reduction of taxes and other state charges is a prerequisite for staying alive (currently: over 50%)
- Capital investment and inside reorganization at the Hungarian food companies is inevitable
- The companies have to discover their efficiency reserves
- New management techniques have to be applied:
- Switch to a more market-oriented production
- Professional marketing activity
- Cost-efficient production
- Conscious „brand name” management
- Conscious PL strategy: the manufacturers have created their own high-quality competitors under the egis of capacity efficiency. In the future they should distinguish the PL products and their branded products in product features as well.
